

GARRABRIDGE

2nd Edition Catalogue

Company Mission Statement

Since 1999, Garrabridge has made its home in Ireland. Here we distribute interior and exterior lighting fixtures for projects throughout Ireland, The UK, Europe and The Middle East. Garrabridge Lighting & Controls Ltd is an independent center with local management accountable for all Design, Sales and distribution... This management approach allows us the independence to focus on the unique demands of our specific markets with a competitive entrepreneurial spirit. While we work closely with our International manufacturing colleagues, products are selected, engineered and manufactured to meet the demands of the UK building requirements.

Our market philosophy enables the Architectural Designer to select from a catalogue of standards as well as work with our team of local engineers and lighting application professionals to establish their own unique design solution. Garrabridge is the place to find original designs, manufactured from quality materials, produced at a competitive price.

As a multinational company Garrabridge calls upon the talents of engineers and designers to deliver the most innovative concepts in lighting design. And in our London and facility, we back up this global perspective with the strength of European manufacturing capability.

Garrabridge develops ambitious lighting systems which are aesthetically pleasing, economically feasible and environmentally sound. Many luminaires are developed by our manufacturers engineers and designers, others are created by well known lighting designers and architects in collaboration with our Research & Development Department. This allows us the flexibility to adapt our designs to your specific applications.

Garrabridge's manufacturing facilities are very modern, to a large extent CNC controlled. It enables us to create tooling necessary to carry out the customer's individual projects.

Equipment such as a spinning machine enables us to obtain aluminum reflectors and structural elements of any shape. Numerical punching and folding machines allow us to produce the structural components of all kinds of fittings of steel, aluminum and stainless steel sheets. Among our machinery we also have numerical lathes and milling machines and a water laser which give us great flexibility in designing new products.

The lamp mirrors with the highest quality and efficiency of the reflectors are provided by the technological line for vacuum metalisation, while the powder painting technology allows us to propose to our customers a full spectrum of colours of the fittings in our product range.

The entire technological process is overseen by our highly qualified staff. Their skills are constantly improved so that the company can meet more customer requirements.

Garrabridge produces fittings according to the customer's individual ideas - we follow the ideology saying that *if in your imagination there is a vision of a fitting, come and we will make it a reality.* The Company's innovativeness can be seen in all of its activities: starting from the creation of trends, adaptation to current fashion to dynamic changes in technological and production processes. The company's motto is to create a fitting from design to product, therefore we have our own construction and development department.

We are able to design and produce new products according to our customers individual request. Our construction department can prepare construction drawings, 3D visualisations and samples for approval before ordering.
